

# 2026 CNC Website Performance Report

## Most CNC Companies Still Struggle to Meet Digital Performance Standards

Benchmarking data from DBS Interactive reveals persistent gaps in page speed, usability, search readiness, and technical quality across CNC industry websites, with a widening divide between companies that have invested in their digital presence and those that have not.

A website that loads slowly, fails basic security standards, and frustrates users costs a CNC company business. B2B buyers research vendors almost entirely online before making contact. The website is the first sales call, and for most CNC companies, it is not going well.

DBS Interactive audited 504 websites across the CNC manufacturing sector in 2026, covering job shops, distributors, OEMs, and service and parts dealers. Each site was evaluated using Google's Lighthouse tool across four dimensions: page speed and load time, usability and accessibility, search readiness, and adherence to current web standards.

Two years ago, DBS ran the same study on approximately 200 CNC sites. Only one scored Good across all four categories. The 2026 results show no meaningful improvement. The average page speed score moved from 57 to 58. The industry has not closed the gap.

LIGHTHOUSE SCORES BY COMPANY | 504 SITES AUDITED | MOBILE PERFORMANCE | GOOD: 90-100 NEEDS IMPROVEMENT: 50-89 POOR: 0-49
